ALFONICA

Security starts with people

Cybersecurity awareness training built for businesses of every size.

Train your staff, test their awareness, manage security policies and spot when employee login details have been exposed.

Powered by usecure

About us

Your telecoms partner built for growing businesses

At Alfonica, we spent years helping teams stay connected, whatever their size or setup, and that means sitting at the centre of how your business communicates.

uSecure is a natural next step for cyber security awareness. As more businesses move their communication and operations to the cloud, security must follow the same shift. This is why we offer human-risk protection alongside connectivity, through the same account manager, on the same bill.

Hosted VoIP **Business Mobile** **Leased Lines** **Connectivity**

UCaaS **SD-WAN** **Managed Services** **PSTN/ISDN Switch-off**

One account manager for connectivity and security

One bill across every service you take with us

UK-based support, not an offshore ticket queue

Why it matters

Cybersecurity training shouldn't happen just once a year

Cyber threats change and employees can face new risks every day.

Regular training and phishing tests help keep cybersecurity fresh in people's minds, rather than treating it as a once-a-year exercise.

43%

of UK businesses (around 612,000) identified a breach or attack in the last 12 months

69%

of breached businesses say phishing was their most disruptive attack

19%

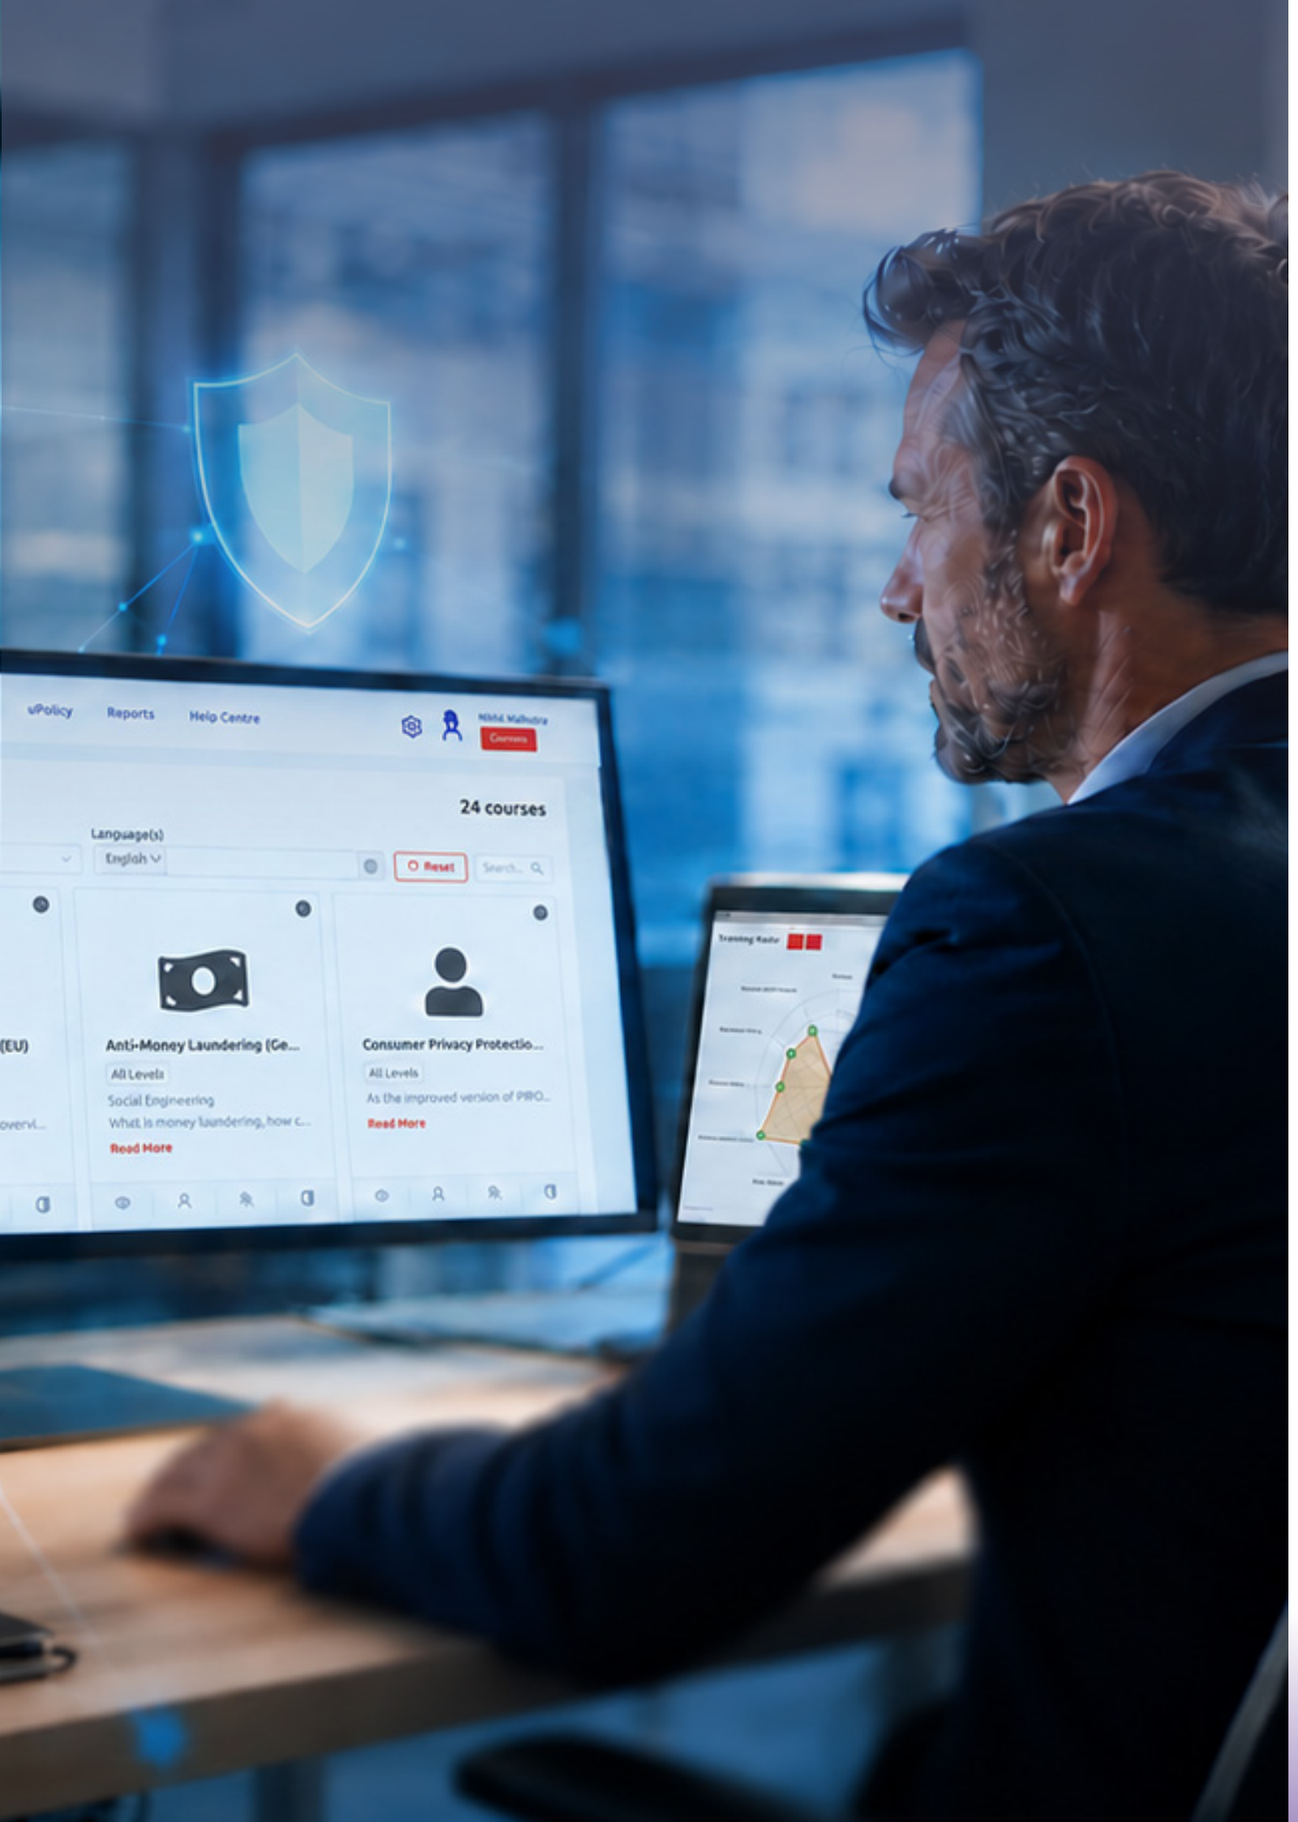

of UK businesses haven't provided any staff cyber security training in the past year

£4000

cost reached by breaches for the worst-affected small businesses

DSIT & Home Office, Cyber Security Breaches Survey 2025/26

One human risk platform

Four ways to build a safer team

uSecure trains your team to spot real threats, tests them with live phishing simulations, keeps every policy sign-off on record, and gives you a clear plan for the moment something goes wrong.

uLearn

Short, engaging training: multiple choice, video walkthroughs and practical exercises that help your team make smarter security decisions day to day.

uPhish

Simulated phishing that uncovers real risk and reinforces the right behaviour, so staff practise spotting a cyber attack before it costs your business access.

uPolicy

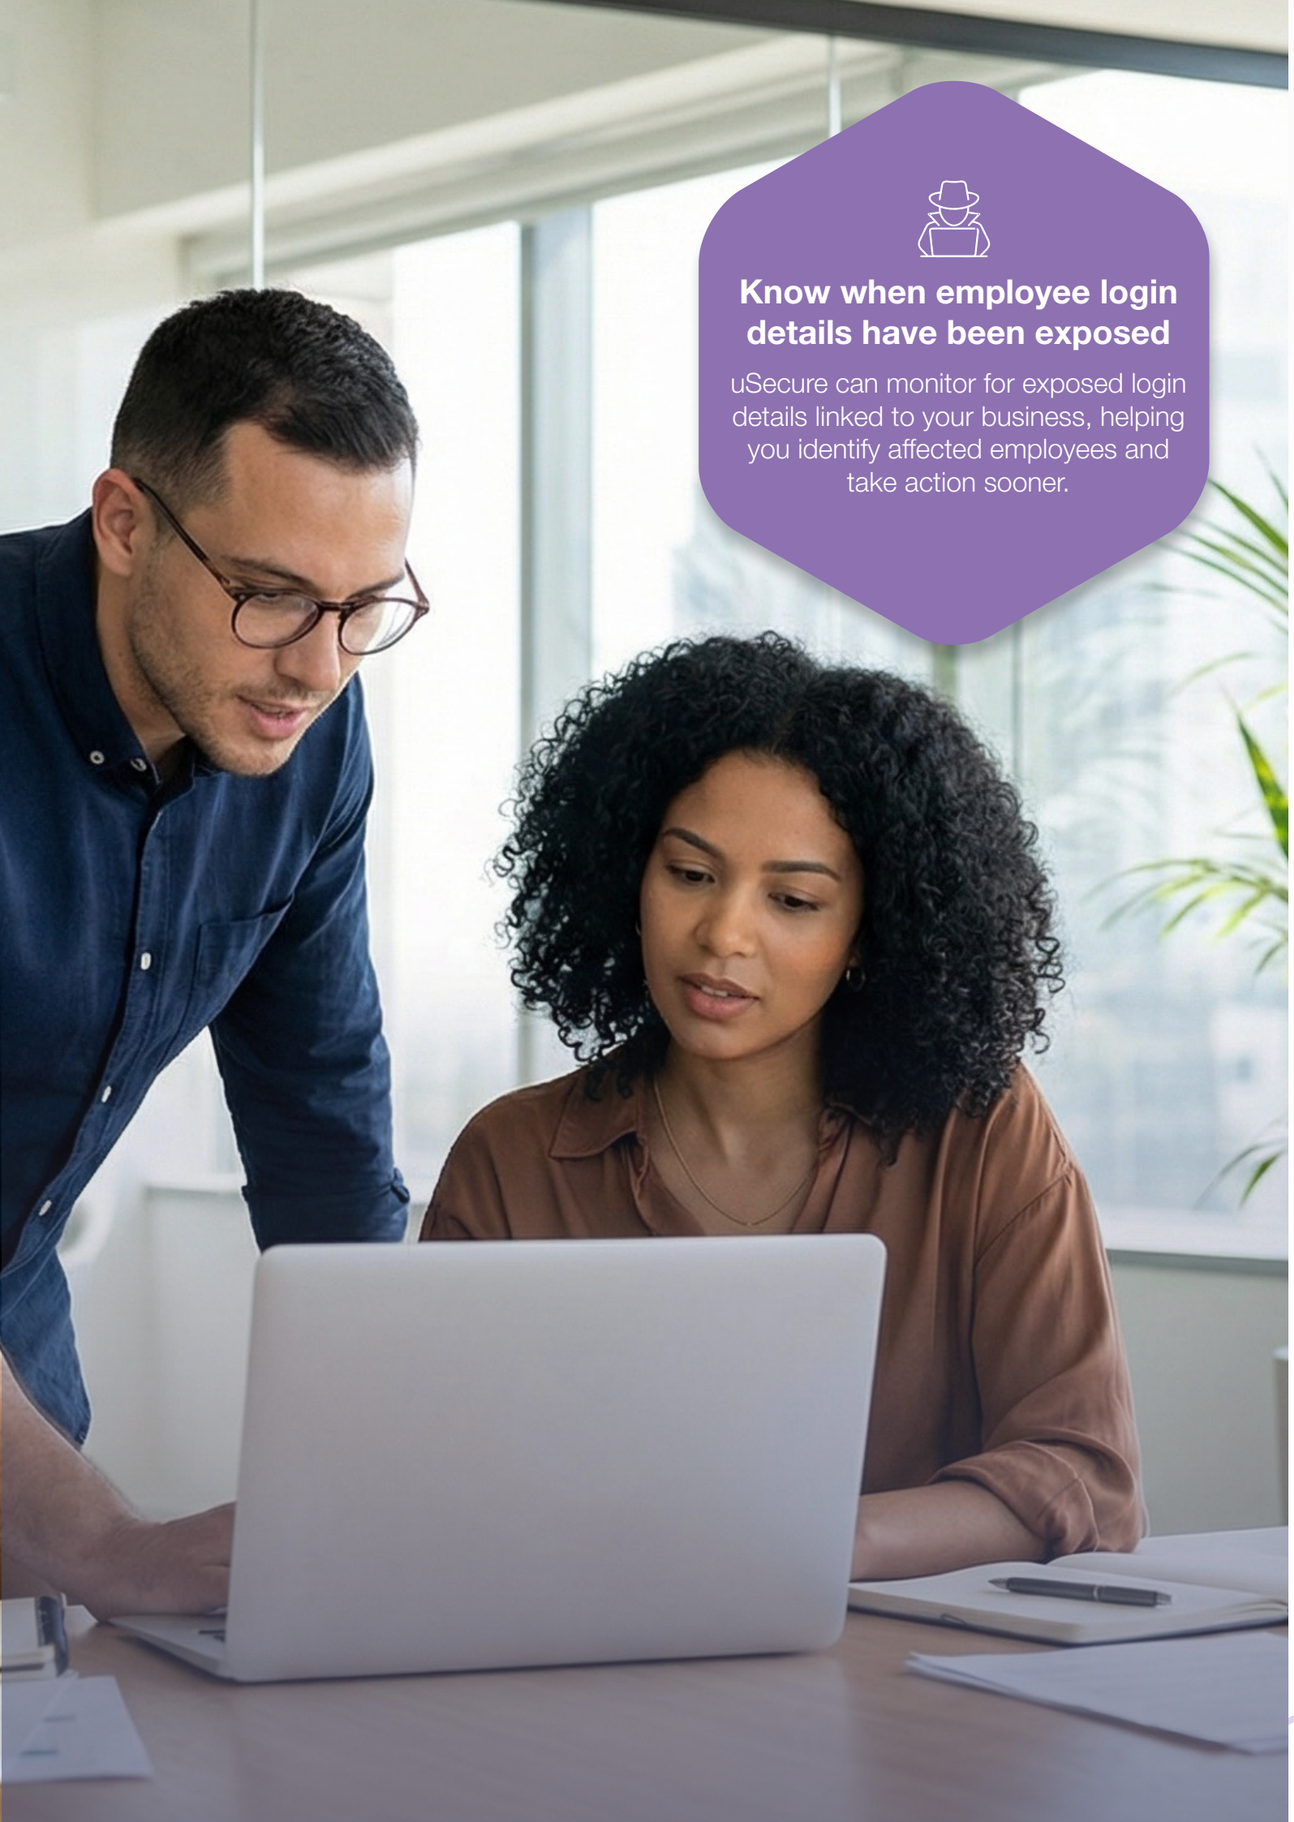

Clear, easy-to-follow policies your team will actually read and sign off, with a full audit trail ready for the next client or insurance check.

uBreach

A dark-web exposure scanning tool that helps identify employee email accounts and identities exposed in third-party data breaches. Available as a paid add-on.

uHealth

Human risk intelligence combining employee behaviour, security awareness and credential exposure.

Know when employee login details have been exposed

uSecure can monitor for exposed login details linked to your business, helping you identify affected employees and take action sooner.

Build better cyber habits, step by step

How uSecure Works

Check
See where your employees may need more help with cybersecurity.

Train
Give staff relevant training based on the areas they need to improve.

Measure
Track training, phishing tests and employee progress over time.

Show
Keep clear records that can help demonstrate the steps your business is taking towards cybersecurity and compliance.

Is your team becoming safer?

Completing training is useful, but knowing whether things are improving is even better.

uSecure gives you a simple view of employee cyber risk, helping you see:

- Which employees may need more support
- How staff perform in phishing tests
- Who has completed their training
- Who has accepted important policies
- Whether your overall staff risk is improving

This makes it easier to focus attention **where it is needed most.**

How uSecure helps

Cybersecurity protection that grows with your business

Micro & Small Teams

Get simple protection without hiring a security team

Give your staff regular cybersecurity training, phishing tests and policy reminders without having to manage everything manually. uSecure automates much of the process, making it practical for smaller businesses.

Growing SMEs

Keep track as your business grows

As you add more people, uSecure keeps training, phishing results and policy records together. This gives you a clear view of employee progress without relying on spreadsheets or chasing people manually.

Multi-site & Regional

Keep every team working to the same standard

Provide consistent training and policies across different teams and locations, while keeping progress together in one place.
